Install package home:osmc / osmc-installer

Select Your Operating System

CentOS

Debian

openSUSE

RHEL

Ubuntu

Add repository and install manually

(hide)

For **Debian 8.0** run the following as **root**:

```
echo 'deb http://download.opensuse.org/repositories/home:/osmc/Debian_8.0/ /' > /etc/apt/sources.list.d/osmc-installer.list
apt-get update
apt-get install osmc-installer
```

You can add the repository key to apt. Keep in mind that the owner of the key may distribute updates, packages and repositories that your system will trust ([more information](#)). To add the key, run:

```
wget -nv https://download.opensuse.org/repositories/home:osmc/Debian_8.0/Release.key -O Release.key
apt-key add - < Release.key
apt-get update
```

For **Debian 7.0** run the following as **root**:

```
echo 'deb http://download.opensuse.org/repositories/home:/osmc/Debian_7.0/ /' > /etc/apt/sources.list.d/osmc-installer.list
apt-get update
apt-get install osmc-installer
```

You can add the repository key to apt. Keep in mind that the owner of the key may distribute updates, packages and repositories that your system will trust ([more information](#)). To add the key, run:

```
wget -nv https://download.opensuse.org/repositories/home:osmc/Debian_7.0/Release.key -O Release.key
apt-key add - < Release.key
apt-get update
```

Grab binary packages directly
